**Germany**  
Düsseldorf  
14 -17 November 2022

## BUSINESS FRANCE

Business France is the national agency supporting the international development of the French economy, responsible for fostering export growth by French businesses, as well as promoting and facilitating international investment in France.

It promotes France's companies, business image and nationwide attractiveness as an investment location, and also runs the VIE international internship program.

Business France has 1,500 personnel, both in France and in 58 countries throughout the world, who work with a network of partners.

Since January 2019, as part of the reform of the state support system for exports, Business France has given private partners responsibility for supporting French SMEs and mid-size companies in the following markets: Belgium, Hungary, Morocco, Norway, the Philippines and Singapore.

## ▷ FRENCH HEALTHCARE

FRENCH HEALTHCARE is an innovative initiative aimed at bringing together French businesses, researchers and healthcare professionals to jointly promote their activities, expertise and technologies internationally. It helps promote the French vision for global health, based on a humanist approach to care and equitable and fair access to healthcare products and services.

Business France, the national agency supporting the international development of the French economy, in partnership with the French Healthcare Association and the French Ministry for Europe and Foreign Affairs, is responsible for promoting the brand, which aims to coordinate a team approach to stimulate international cooperation and the influence of France's key strengths.

### **France is a key player in global healthcare and has considerable strengths:**

- Global recognition of its public health model among the best of OECD countries;
- Excellent training for its health professionals recognized for their high level of expertise;
- Cutting-edge research in many fields which enjoys international recognition;
- A French pharmaceutical industry among the most efficient in the world;
- A recognized capacity for innovation in all health fields such as the medical device sector, oncology, chronic and infectious diseases, digital health, or the silver economy;
- A dynamic and innovative ecosystem of startups, SMEs and large groups.

These are all the dimensions that the brand French Healthcare promotes internationally.

### Disposables and consumables

Dianosic was founded in 2017 and develops innovative solutions in the field of ENT (Ear, Nose & Throat), a \$50 billion, double digit growth, and still largely underserved market.

Our startup operates right at the frontier between Medtech and Pharma, as we see tremendous opportunities for drug-device combinations in this specialty. The project originates from the ENT Department from the University Hospital of Strasbourg, where unmet clinical needs have been identified.

Our main focus areas are Chronic Rhinitis, Chronic Sinusitis and intranasal bleeding (Epistaxis). Noteworthy, Dianosic has a strong French and German footprint in R&D and manufacturing.

To learn more, contact us:

### Disposables and consumables

PRISM, "a mission company", manufactures and markets 100% French products in the field of individual or collective protection against health and microbial risks. It manufactures customizable, high-quality, non-woven single-use masks (surgical, FFP1, FFP2, FFP3) from machines designed and manufactured locally, and raw materials made in France or Europe.

PRISM is very attentive to its social and environmental responsibility, favors the circular economy, has implemented zero-waste production and uses recycled and 100% recyclable packaging.

Christian Curel, CEO of PRISM, is also President of the national union of French Mask Manufacturers (F2M); he works regularly with the French state and the various ministries to ensure the sustainability of the entire French health product sector.

PRISM is a member of the French Fab, of the French Tech, of the French Mask Manufacturers syndicate (F2M), of the Eurobiomed Health competitiveness cluster.

PRISM is nominee and awarded by France-Relance (French state call for projects).

- FFP2 mask; FFP3 mask; Surgical mask; Customizable Mask; medical mask; sanitary mask; protective mask; duckbill mask; personal protective equipment PPE; Hydroalcoholic gels; Disinfectant wipes; european product manufacturing;covid 19

### Electromedical Equipment / Medical Technology

BONE 3D is a French medtech created in April 2018 that develops, manufactures and markets 3D printed anatomical models, surgical simulators and innovative medical devices. From training healthcare personnel to personalized medicine, Bone3D's teams and our surgeon partners have set themselves the mission of putting the most advanced applications of 3D printing at the service of tomorrow's medicine. All our products are co-developed with specialized doctors and surgeons. The educational tools (models and simulators) are used to inform patients, prepare surgeons for difficult operations or train young practitioners, nurses and paramedics in complex surgical procedures, by offering them an environment close to reality and meeting all the necessary ethical and functional criteria. The medical devices put into practice the ideas of the doctors to improve the quality of the care or the comfort of the patients during interventions and to propose new solutions of prostheses or implants. BONE 3D also offers a service of installation, management and maintenance of 3D printing platforms within the hospital structures. Our knowledge in the biomedical field coupled with our expertise in 3D printing and the development of medical devices (according to the ISO 13485 requirements) give us all the keys to put at the service of the health establishments the advanced technologies with a proven capacity of execution.

### Electromedical Equipment / Medical Technology

For fifty years MDB Texinov® has been a major player in Europe with the design, development and production of warp-knitted technical textiles for various applications on agricultural, medical, and industrial fields. With a manufacturing process certified ISO: 9001:2015 and a strong R&D department, the company is proposing customized products and solutions to its customers. In the 2000s, the company has expanded and strengthened its medical strategy by obtaining ISO 13485:2016 certification dedicated to medical products.

In 2020, supported by its employees, local partners and state subsidies, MDB Texinov started developing FFP2 / FFP3 respirator masks produced on french-made CERA Engineering machines. In order to secure the development of its project, it also acquired from the leading european brand Reicofil a machine for manufacturing PP Meltblown non-woven filters, a material used in the composition of masks.

IT systems and IT solutions

PREVIA is an artificial intelligence capable of forecasting pathologies. Compatible with all major EHR systems using FHIR technology, it analyzes the data of thousands of patients in real time and accurately identifies the complications risks. The first score SEPSI-SCORE, MD certified in 2021, alerts up to 48 hours before the first symptoms of sepsis. Health care professionals can trigger treatment protocols earlier, reducing lengths of stay and saving lives.

### Laboratory equipment, Diagnostic Tests

AAZ is a French company dedicated to the development, manufacturing and distribution of screening self-tests in France and worldwide. These self-tests are dedicated for people who cannot or do not wish to go to a laboratory or to a hospital for privacy reasons. From diagnostic self-tests conception to validation, the AAZ company is also involved in research and investigation, in collaboration with private and academic partners. The structure of the company allows it to work in all three stages, from the proof of concept to the EC marking of its In Vitro Diagnostic Medical Devices (IVDMD) to the commercialization through its internal network. For more than 25 years, we put our skills at the service of health professionals and of the general population in order to provide them with reliable products that are perfectly suitable for their needs. AAZ is the leading French company and the main supplier of COVID tests (antigen, serologic and self-test) to the French Government.

- COVID test, COVID self-test, antigen test, HIV test, serology test, gluten test, french company

### Laboratory equipment, Diagnostic Tests

CliniSciences Group is a French manufacturer and distributor of products and reagents to diagnostic and research labs. Oncomedics and CliniSciences Group have been partners since 2022 to develop and commercialize the Oncogramme®. Oncogramme® predicts the anti-cancer activity of existing drugs by testing them directly on a patient's operated tumor. Oncogramme® can be used as IVD functional test for stage IV colorectal cancer and as a tool for preclinical and clinical studies (mCRC, breast, ovary, glioblastoma, lung).

- Oncogramme, Colorectal cancer, Cancer, Chemotherapy, Folfirinox, Folfox, Folfiri, 5FU, cancer diagnostic, metastasis, Surgery, breast, Ovary, treatment, preclinical, clinical, service, Oncologist, tumor

### Laboratory equipment, Diagnostic Tests

The company was created in 2014 by four doctors who wanted to meet the needs of rapid diagnosis of infectious diseases, particularly in isolated areas.

They surrounded themselves with a team based in Marseille and composed today of 7 members who come from various backgrounds and who have in common the desire to improve the diagnosis, the prevention and the protection in infectious environment.

Innovation is a priority at Pocramé. It allows constant product adaptation to the demands of the users, but also the constraints and challenges associated with the emergence of new infections and their evolution.

Thus, the global health crisis imposed by the COVID-19 pandemic have facilitated proving the effectiveness of the tools developed by Pocramé as well as the development of its market in France and abroad.

- POC, diagnostic, infectious diseases, prevention, workstation, testing, PCR contamination

### Laboratory equipment, Diagnostic Tests

Theradiag is a market leader in autoimmune disease testing and the founder of "theranostics". Capitalizing on its expertise in the diagnostics market, the Company has been developing, manufacturing, and marketing innovative in vitro diagnostic (IVD) tests for over 30 years. Theradiag pioneered "theranostics" testing (combining therapy with diagnosis), which measures the efficacy of biotherapy in the treatment of chronic inflammatory diseases. Going beyond mere diagnosis, Theranostics aims to help clinicians set up "customized treatment" for each patient. This method favors the individualization of treatment, evaluation of its efficacy and the prevention of drug resistance. In response to this challenge, Theradiag develops and markets the CE-marked TRACKER® range, a comprehensive solution of inestimable medical value.

Further to CE marking in 2010 of the first Lisa-Tracker kits, Theradiag has kept expanding its Tracker panel by developing and launching new kits but also new automated solution such as the new i-Track10 and its i-Tracker kits.

### Medical Services and Publications

French Healthcare is an innovative public-private initiative aimed at bringing together the key players in the French healthcare ecosystem (companies, researchers, healthcare professionals, key public stakeholders, etc.) to promote their innovations, expertises and technologies internationally. It helps promote the French vision for global health, based on a humanist approach to care and equitable and fair access to healthcare products and services. This initiative is supported by the Ministry for Europe and Foreign Affairs, the French Healthcare Association and Business France. French Healthcare Association federates French healthcare players ( medical device and pharma companies, hospitals, research centers, profesional federations..) to showcase medical excellence and collective solutions abroad.

NOVEMO

Physiotherapy - Orthopaedic Technology

During rehabilitation, patients are asked to apply a certain percentage of support on one foot or the other. This relieves, or on the contrary, helps the muscle to strengthen. However, without any tool to measure this percentage of support, patients find themselves helpless and may not correctly apply the instructions given by their doctor or physiotherapist. The Claudile connected boot responds to this difficulty: it sends information on the percentage of support to a mobile application at the service of the patient and the medical staff. More concretely, the device uses sensors (Wheatstone bridge) in series which analyze live the weight applied by the patient thanks to the software included in the shoe. The data is sent by Bluetooth low energy to a mobile phone or tablet, then the application transcribes the data. These can be projected with a video projector to make rehabilitation sessions more fun and more motivating. Three feedback systems are in place: sound, visual and vibratory.

- Partial weight bearing,

### Physiotherapy - Orthopaedic Technology

Herdegen has now become one of the biggest independent manufacturers on the European home care market of products for disabled patients. We employ 170 workers of 30 000sqm facility. We are n°1 in the world for the production of elbow crutches for example and unlike most of our competitors, we have chosen to focus on automating our production processes and reduce imports from Asia. Each of our products has been developed in France with designers in order to bring useful, innovative and exclusive products to our customers and their patients. Herdegen has also successfully set up 3 branches abroad over the last 15 years, and our investments in automating our production lines have enabled us to keep offering high-quality, made-in- France products at competitive prices.

We are proud to have been the first manufacturer to develop:

- Contact, a soft toilet raiser made of injected foam
- Advance, a crutch featuring a double-injected soft padding
- Ampiplus, a home care bed easy to mount and dismount in 5 minutes.

Most of our products have been successfully tested to the ISO CEN standards.

- MOBILITY; HOME CARE PRODUCTS; elbow crutches; beds; raised toilet seats; rollator; cushions; decubitus; mattresses; transfer;

### Physiotherapy - Orthopaedic Technology

SIDAS is founded by three ski instructors. Their personalities and their convictions position SIDAS on the buoyant ski market, developing and marketing an insole moulded to one's foot shape. Requested by foot surgeon and doctors, SIDAS opens up to a new market: medical appliances. Birth of the PODIATECH brand and development of adapted solutions for foot-health professionals. Our multi-disciplinary team, backed up by expert professionals, devised a range of innovative solutions to meet our customers' requirements. Over the years, our openness to international markets has led us to develop technology and materials that meet the different requirements of podiatry around the world. As a result, today PODIATECH is the leading partner of foot-health professionals worldwide.

- Insole, foot orthotics, footcare, materials, 3D scan, thermomolding,

### Physiotherapy - Orthopaedic Technology

SPARTHA MEDICAL specialises in the development of multifunctional coatings for medical devices and for daily use. Our patented coatings have antiviral, antimicrobial and anti-inflammatory effects while avoiding bacterial resistance. We develop customised, implant-specific coatings that reduce implant-related complications. The coatings are intended for almost all complex surfaces of a wide range of medical devices (implants, dressings, surgical materials, ...).

- Healthcare, Medical devices, Coatings, Biomaterials, Antibacterial, Anti-inflammatory, Antiviral, Nanomaterials, Supramolecular chemistry, Polymers

### Physiotherapy - Orthopaedic Technology

Teknimed manufactures innovative high quality biomaterials and medical products to improve the quality of life of patients.

Teknimed designs, develops, registers and produces products for orthopedics, trauma, sports medicine and spine surgeries. Our predominant competencies on orthobiologics products and services enable us to accompany our clients continuously in clinical surgeries.

Our Research and Development department and their transversal skills enable us to have a holistic overview to project management.

We are best known for conceiving and manufacturing implants and their ancillary systems.

Each product is formulated by our expert chemists and synthesized internally after thorough validation and qualification all the way through to worldwide regulatory validation.

- Orthopedic, spine surgery, vertebroplasty, kyphoplasty, cementoplasty, ligamentoplasty, sports medicine, biomaterials, acrylic bone cements, bone substitutes, resorbable polymers, textiles, instrumentation

### Components - modules - OEM equipment

Since 2003, AIRFAN develops, produces and sells centrifugal blowers for ventilators and respiratory devices requiring reliability and high performance.

Our blowers are mainly used for acute, sub-acute and home care ventilator applications with soundproof solution offering high efficiency and outstanding acceleration performance.

Our blower utilization (and not limited to) HNFC, Neonat application, Cough assist devices, CPAP, invasive & no-invasive respirators.

Airfan is ISO9001 & ISO13485 certified

- Blower; Turbine; Reliability; Performance; Ventilator

### Components - modules - OEM equipment

OSC provides high quality products for orthopedic and spinal applications. OSC's goal is to provide a comprehensive level of contract services to all implant manufacturers at single stop.

- Instruments ; Instrument cases ; Custom implants ; Serial implants ; Titanium coating ; HA coating ; Bioceramics ; Sterile packaging ; Cement restrictors

### Manufacturing of Components

SELENIUM MEDICAL is an innovative contract manufacturing company, 100% dedicated to medical devices and pharmaceutical applications. Its know-how is offered to all manufacturers and subcontractors in the healthcare sector (orthopaedic implants, soft tissues, robotics, etc.) and covers today 4 areas of expertise: Surface treatment, with services such as robotized sandblasting, anodizing, electropolishing, passivation, laser marking as well as StarSurr<sup>®</sup>, our patented nano-etching process improving the wettability of titanium implants and thus promoting the bone on-growth. Upon request, we can also design, manufacture and deliver to your facility a fully qualified process answering to your own requirements. Plastic injection and thermoforming in ISO7 environment, proposed for the production of personalized sterile packaging items, and for the full manufacturing of single use instrument kits or any other pharmaceutical application. Clean room assembling / kitting / sterile packaging in standard sterile barrier systems (pouches, blisters) as well as in our innovative solutions for orthopedic and dental implants (SoEasy<sup>®</sup>, SoKlean<sup>®</sup> and SoBliss<sup>®</sup> among others). -In support of these 3 operational entities and with its own experience in CE and 510k marking filings for its own products, Selenium offers R&D, consulting, and validation management services for its clients. Selenium Medical has indeed a strong expertise in carrying out the validations of manufacturing processes or special processes such as cleaning, sterile packaging and sterilization.

- Medical devices, Surface treatment, nano-etching, Sterile packaging, innovative sterile barrier systems, no-touch holders, Plastic injection, Clean room, Implants, single use instruments

## STSI

## Microtechnology

Specialised in contract development and manufacturing of medical devices, Cisteo MEDICAL assists their customers at every stage of their projects. Whether it's proposing initial ideas, verifying design, helping to meet regulatory requirements or performing controlled atmosphere production, we bring ideas to life in a variety of fields, including minimally invasive surgery (implants and instruments). Whether you are a manufacturer or a health professional, we are here to accompany you in all your projects.

- Medical devices, minimally invasive surgery, class III, AIMD, silicone processing, nitinol shaping, 21 CFR part 820, ISO 13485, microtechnology, electronic, regulatory affairs, quality assurance

## ADVANCED SILICONE COATING

Hall 8b - Booth F10 A

ZI du mariage

[in](#) creative-eurecom

[www.creative-crossway.fr](http://www.creative-crossway.fr)

Services

CREATIVE EURECOM brings your idea to the serial production. We act as an ISO 13485 development center and contract manufacturer. Through a tailored engineering process we offer advanced system & product engineering services (incl. electronics, software, mechanics). We support for the customer in defining his requirements and performance, with a serial production target. In order to meet the most specific needs, we have also developed a serious network of partners (motorisation, regulation, sensors). Let's work together on your project!

- Innovation, R&D, design, electronic, software, mechanic, mechatronic, engineering, system, production, manufacturing

## DEVICEMED

Hall 8b - Booth E12 C

33 rue du Puy-de-Dôme  
63370 LEMPDES  
France
